Enthusiastic Bonanza Hunters Return to Salt Lake.

THEY VISIT PINTO IRON

AND INSPECT COAL DEPOSITS EAST OF CEDAR CITY.

Magnificent Ore Bodies-Important Developments Made of Late In the Famous Mercur Mine-Another "Divvy" of Velvet-The Mammoth Has Declared Its Regular Monthly Dividend — Sacramento Touches Fifty-two—Nip and Tuck With the Investment and Speculative Stocks -Regarding the Dalton-The April Fool-Ore and Bullion-Silver and Lead-Mining Notes and

Three well pleased and enthusiastic bonanza hunters returned to the city yesterday morning over the Oregon Short Line from Iron county, the personnel of the party being Colonel S. B. Milner, of Salt Lake, and Charite and Harley Milner, of Mercur.

These gentlemen left for Pinto Iron These gentlemen left for Pinto Iron district, in Iron county, a week ago, and although their stay in the south was necessarily short, they saw enough while there to impress them with the fact that Iron county is one of the best and most extensive mineralized portions of the west.

While on their way to Pinto Iron the party stopped off at Cedar City and made a visu of inspection up Coal Creek canyon, just back of this historic and picturesque little city, where they made an examination of the coel fields of that section and the mountains of

of that section and the mountains of gypsum and alum, which also abound

gypsum and aium, which also abound there in unlimited quantities.

Across the valley, west from Cedar, an inspection was also made of the magnificent mountains of iron where the supply of this metal is so immense and the quality is so fine, that one is led to believe that the world could be supplied with iron and steel from this locality for generations to come without a visible diminution of the amount of crude ore in sight, an estimate being made that in the main iron blowout alone there are many millions of tons of this commodity exposed above ground.

lions of tons of this commodity exposed above ground.

Not far from the fron mountain is the Homestake mine, on which the colonel has a lease and bond, and in the development of which a force of men under the management of Andrew Hansan has been at work all winter.

Good headway has been made in the opening up of this promising property, and the indications are that later on a second Horn Silver will be disclosed. and the indications are that later on a second Horn Silver will be disclosed, as the ledge is a mammoth one and very rich ore shows on the surface. It is proposed to continue work in the exploitation of the Homestake, and next week it is the intention of Charles Milner to return to the district for the purpose of beginning development work on a conner appropriation discovered.

purpose of beginning development work on a copper sproposition discovered about two miles east of the Homestake. Mr Hanson made this find a short time ago and has located four claims on the ledge for Colonel Milner, and it is safe to say that the vein is a large one, as boulders of copper float, as large as a hogshead, were found some little distance down the mountain, where they had broken and rolled from the ledge. In its variety of mineral deposits.

and commercial commodities in county is hard to beat, at least this the opinion of the Milner brothers.

### MAGNIFICENT ORE BODIES. Important Developments Made

Late In the Famous Mercur mine.

Important developments have bee made of late in the development of th famous Mercur mine—development which go far towards proving the ex of magnificent ore this property in a locality which, a yes this property in a locality which, a year or two ago, was not considered as be ing of special value. Reference is especially made to th Lulu claim, embraced in the com-pany's holdings, which, on account of

neglected in the past in the way o

neglected in the past in the way of development.

Quite a stir was created in mining circles in this city a few months ago on account of the showing made in what is now known as the Lulu tunnel, where splendid bodies of oxidized milling ore of good gold values were exposed, since which time an overhead train has been built from the mouth of the tunnel to the Mattle ore bins, on a spur of the Salt Lake & Mercur railroad, and now over 5e tons of exrailroad, and now over 50 tons of ex-cellent milling stuff is being sent down daily from the Lulu workings and it is anticipated that the output from this portion of the mine will be materially increased in the near future, or as soon

increased in the near future, or as soon as room can be made there so that more men can be put to work.

The Luiu tunnel is on the south end of the Luiu claim, thus leaving a large area the mineral value of which was problematical, but developments made during the past few weeks put a new phase to this question and there is now reason to believe that the whole claim is controlly midestifuntly and the problematics of the controlly midestifuntly and the south of the controlly midestifuntly and the south of the controlly midestifuntly and the south of the controlly midestifuntly and the controlly midestifuntly and the controlly midestifuntly and the controlled entirely underlaid with one vast zone

of ore.

The developments above alluded to onsist of an extension of a drift from the old workings of the Mercur mine-into the north end of the Luiu claim. This drift is the longest workings in the mine, and extends into the Luiu on the north end of the lode for a dis-tance of 250 feet on the upper vein, the entire distance being one solid mass of good one and still there is no end the entire distance being one solid mass of good ore, and still there is no end of mineral, and as the workings in this part of the mine are distant nearly 1,500 feet from the Luin tunnel, and as no fault or break is known to exist on this ground, which is nearly level and unbroken in this locality, it is only fair to presume that the intervening distance is one great body of ore.

The Mercur mine never looked better than it does today, one proof of which is that the semi-monthly shipments of cyanides just made from the mill is

anides just made from the mill is valued at from \$24,000 to \$25,000.

### ANOTHER "DIVVY" OF VELVET.

The Mammoth Has Declared Its Regular Monthly Dividend.

The directors of the Mammoth Min-ing company met yesterday and de-clared its regular monthly dividend of 5 cents a share, or \$20,000, payable on the first day of May, the transfer books

the first day of May, the transfer books of the company to be closed on April 25, to be reopened on May 2.

This dividend is the 45d that the company has declared since it reached a paying basis, and with the payment of this month's "velvet" its dividend account will have reached the magnificent sum of \$1.180,000, and it is the understanding that it is the intention of the company to maintain this monthly distribution for an indefinite period, which intention is based on the spiendid condition of the mine, which, it is stated, has not looked so well for years.

The month of April will witness a decrease in the earnings of the company on account of the enforced close, down of the mine and mill for several

down of the mine and mill for several days on account of a shortage in mine timbers, but the work has been started up again, as timber is beginning to ar-rive, and it will not be long now be-

better equipped with machinery than the Mammoth, besides which the com-pany owns a water system that is a source of revenue, in addition to which the facilities for the handling and ship-ping of the ore from the mine to the market are up to date in every re-

Nip and Tuck With the Investment and Speculative Stocks.

Business was fairly active in mining share circles yesterday, and in the pit

share circles yesterday, and in the pit of the exchange it was nip and tuck with the investment and speculative stocks for the lead, honors being about even at the close of the call, which was characterized by still another advance in Northern Light and Sacramento.

A number of listed securities were ignored, while others were barely able to maintain former quotations, and as it was, declines were noticed, solid values being no impediment to the bears, who boidly made attacks on such gilt-edged dividend payers as Mercur, Mammoth and Geyser-Marion, the prospective payers faring better than stocks which had millions to their credit. Ajax took the initiative in the way of sales, and 200 shares were dropped at 38½ cents. Geyser-Marion was weak in the bidding, while Mammoth was a trife stronger than during the previous cell. All was direction bears, who boldly made attacks on such a glit-edged dividend payers as Mercur, Mammoth and Geyser-Marion, the prospective payers faring better than a stocks which had millions to their credit. Alax took the initiative in the way of sales, and 200 shares were dropped at 38½ cents. Geyser-Marion was weak in the bidding, while Mammoth was a trifle stronger than during the previous call. All was fitention when Sacramento was reached, and the stocks started off on a jump with a bid of 50 cents, the shares being wanted in blocks of several thousand at this figure, and before the close a sale was recorded at 52 cents. Northern Light was also in good demand, and at a marked advance, a small lot changing hands at 36 cents.

The unlisted stocks also made a good showing, and Chloride Point maintained its former record, selling readily at 39 cents and \$1. South Swansea found a buyer at \$1.20, and continued bids at this figure failed to draw out any more shares. Homestake, Sunbeam and Little Pittsburg displayed considerable activity, but at quotations below prices of a few days ago.

The transactions of the day were as follows:

The transactions of the day were as

day.

G. G. Hall is in from his Congor copper mines in the Datton and Lark country, above Bingham. Mr. Hall states that the Congor is looking fine and that he is pushing work in its extensive and thorough development. Mr. Hall also says that Elmer Hill is taking out shipments of very fine ore from the Keystone, and that in this bonanza some becutiful samples of native copper are being taken out. The Congor and Keystone are in a great copper region and the showing there is so encouraging that the spot is taking on new life, and there promises to be a great deal of activity there this season.

Word comes from Bingham that in the

there this season.

Word comes from Bingham that in the driving of the lower tunnel in the Liberal mine, up Markham guich, a winze in the Montezuma, adjoining, had been drained by the Liberal workings to such an extent that work could be resumed in it again, and that in prosecuting operations in the winze, a fine body of mineral had been disclosed, from which one man is now taking out eight tons of ore daily, which will net the owners of the property \$30 a ton. The Montesuma and the Liberal adjoin each other, the road up the canyon being the dividing line between the two properties, and it is fair to presume, with greater development, that the Liberal will in time make as famous a producer as the Montesuma is reputed to be.

producer as the Montezuma is reputed to be.

A dispatch from Ouray, Colo., says: An important strike in the Jesse, a mine plocated just above the depot in this city, has just leaked out. This mine is the property of Mrs. Alice Brown, of Ouray, being worked under lease by B. W. Chadwiek and Harry O'Neill. The strike was made about two weeks ago, but the leasers would not give any details until today, thinking they could get a bond on the property. The richness of the strike became too generally known, and they could not buy the mine. The property is being worked by tunnel, and the men are in about 185 feet. The ore will run about 18700 per ton. Shipments will not the possessors very satisfactory returns. People here are jubiliant over the find and a are flocking to the tunnel by hundreds.

Fred Crowton and associates, who have just completed a contract in the lease.

ple here are jubilant over the find and are flocking to the tunnel by hundreds.

Fred Crowton and associates, who have just completed a contract in the development of the Florence mine. A Skull valley, are in the city, with the expectation of returning to the mine within a short time, to begin work on another contract, as it is the intention of the company to open up the property in a therough manner this summer. It is stated that the Florence is a mine of more than usual merit, the ledge of gold-hearing rock being magnificent in its proportions, as it has been cross-out from the bottom of the shaft for a distance of 20 feet, and the shaft for a distance of 20 feet, and the shaft for a distance of 20 feet and the chaft for a distance well and that the state that the ore leaches well, and that the ore carries good gold values.

Still Offering Testimony In the Ogden Water Case.

WITNESSES ARE EXAMINED

POSED OF OLD MATERIAL.

TO SHOW THE DEFENDANTS DIS-

And Used Some In the Construction of the New System-Contract Between Bothwell and Jarvis and Conklin Put In Evidence-The Latter Acquired Three-sevenths Interest In the Bear River Com-

In the Ogden waterworks case yes terday nine witnesses were examined for the plaintiff. The gist of the testimony was that when the transfer of the system was made under the lease to the defendants, the city had a fairly good waterworks system, and that the defendants used some portions of the old material in the construction of the new system, and that they also sold some material which was part and par-cel of the old system. Attorney Allison informed the court

Attorney Alison informed the court that the remittitur from the supreme court had been received by the clerk of the district court, instructing Mr. Dee to turn the waterworks property over to the defendants, as well as the cash on hand. Mr. Allison said that Judge Dee had turned over the property as well as \$5,990 in money. There was still some cash on hand, and not wishing the receiver to appear in contempt, Mr. Allison asked for five days' time when the question of Judge Dee's compensation would in the meantime be as-certained and fixed. The request was

JAMES B. HOPKINS.

James B. Hopkins testified that he saw material in use in the old system being put into the new. About a carload of crosses and tees were hauled to the yards and probably sold. Witness said he was familiar with all parts of the new system, the operation of which was begun in the fall of 1890. The new yare was laid between the outh. new pipe was laid between the curb-ing and the old pipe and nearer the sidewalk. The city was never at any time without water. Twenty of the old hydrants were used in the new system, and 55 new hydrants were put in. All and as new hydrants were put in. All the hydrants were placed under the direction of the city officials. A temporary connection was made at Twenty-fourth street and Adams avenue, between the old and the new systems, before the latter was completed, and the fore the latter was completed, and that connection lasted six months. Some of the gates from the old system were used in the new, where the old hy-drants were used, none of the old ser-vice pipes were used in the construction of the new system. The old service of the new system. The old service pipes are still in the ground near the new ones. The old crosses and tees were not used in the construction of the new system; they were not suitable. Some of the old gates, however, were used.

JUDGE DEE.

JUDGE DEE.

Thomas D. Dee, examined by Mr. MacMillan, said he had resided in the city of Ogden for 35 years, and was, during that time, off and on, connected with the municipal government in various ways. In 1885 he held a position with the defendant company, when it secured control of the system. The city had a good system at the time the defendants obtained control of it. The city used all the water the old pipes would convey. The pipes were laid on an incline, and thus pressure was obtained. Witness was present when Messrs. Pingree and Boyle measured the flow of water entering the reservoir from all sources. Witness estimated that the flow was 1,250,000 gallons every 25 hours. The wooden pipes were every 25 hours. The wooden pipes were in good condition, and would have done service for quite a long time. The supply of water from Ogden canyon was estimated at about 1,000,000 gallons every 24 hours.

every 24 hours.

In cross examination by Mr. Kimball the witness said, in winter the water from Strong and Water Falls canyon was used. He denied having reported to the city council as a member of the An Alliance Concealed Under An Ar- water committee that the water system bitration Treaty.

New York, April 21.—A dispatch to indequate the supply would be indequate next year, because it was expected the population of the city

BOUGHT MATERIAL.

E. B. Leavitt, examined by Judge Dey, testified that he had purchased a number of pipe attachments which were in use in the old system from Manager Spirey of the new system. That was in 1892. He paid about \$12

PROFESSOR FORTIER.

Professor Fortier of the Agricultural college, said he was at one time chief engineer for the defendant company, the remembered being asked by Captain Spirey what he considered the material in the old system was worth, and be the old system was worth, and he then expressed his opinion that it was practically valueless and not worth taking up. He was still of that opinion. Spirey spoke as if it was worth 5c. or 10c. a foot.

FRANCHISE AND BONDS

as to include not only arbitration but alliance under certain circumstances; certainly with nothing less than positive assurances of the friendship of the British government in the present crisis and its willingness to go to any extent to prove this good feeling.

The Antarctic Expedition.

It is rumored in official circles that the government contemplates sending an expedition to the Antarctic Circle during the ensuing year. This, it is said, will comprise eminent navigators, geographers, naturalists and astronomers. There can be little doubt that discoveries will be made of the utmost importance to science. However useful these may be, they can never exceed the value of that discovery so fraught with benefit to the human race—Hostetter's Stomach Bilters. This truly estimable medicine has achieved a reputation for curative and preventive efficacy in cases of inorganic diseases which has never had a parallel in the history of medicine. ## THE MINING CONGRESS.

RECEIVES THE SANCTION OF THE STATE DEPARTMENT.

A Message Received Yesterday From Senator Cannon-Major Wilde, of THE KNUTSFORD ANSWERS Mercur, Writes to Secretary Johnson-More Subscriptions.

A telegram from Senator Cannon to Governor Wells, yesterday, brought the very gratifying news that the state department has given the International Mining congress its sanction and will see that invitatons to the foreign governments go through the regular diplomatic channels.

governments go through the regular diplomatic channels.

Senator Cannon's message was in response to a letter sent him some days ago by the governor, asking his assistance in bringing the congress to the notice of other nations. The invitations sent out by the executive committee to the foreign representatives in Washington were all acknowledged most cordially, but in nearly every instance the replies intimated that the governments addressed could take no official notice of the invitations unless they came from the secretary of state. It was deemed destrable to have the participation of all nations as far as possible, in the congress, and Senator Cannon was asked to see what could be done in the matter. Evidently he has reached a favorable result, for his telegram to the governor reads:

"State department will transmit your invitations for mining congress to

his telegram to the governor reads:

"State department will transmit your invitations for mining congress to foreign governments. Direct formal invitations to each government through the state department promptly."

In accordance with these instructions, Secretary Johnson is preparing forms for the invitations and they will be forwarded as promptly as possible. The mining men of Mercur want to entertain the delegates to the congress when they reach there and have already begun making their plans. In a

when they reach there and have already begun making their plans. In a letter to the secretary on this subject, Mayor Wilde, of the cyanide town, says: "Our people are enthusiastic in their support of the congress and it has been suggested to the writer that an effort be put forth to arrange, as one of the features of the congress, an excursion to Mercur, where visiting mining men could have the opportunity of examining the cyanide process and the workings of the district. We shall endeavor to arrange so that persons so desiring may inspect some

The Utah Title Insurance & Trust company has entered suit against P.
L. Williams, Katie S. Williams, John
P. Dooly, Arthur L. Thomas and Ambrose W. Lyman for the foreclosure
of a trust deed to lot 4, block 13, plat
D. Salt Lake City survey, in the sum
of 85,000, together with interest and
costs.

Mrs. Salkield and Mrs. Criddle File

Complaints.

Er ma Salkield has entered suit for divorce from Sarah M. Smith by default on the grounds of desertion. The parties were divorce from William Salkield, alleging a very large at Salmon City, Ida., on Sept. D. Moore Lindsay vs. W. S. Fugate; judgment for the plaintiff for \$110. Hecla Gold Mining company vs. Matt T. Gisborn; continued till Saturday.

that the marriage took place in this city on July 3, 1884, and that for more than a year the defendant has failed and neglected to support the plaintiff, who has been obliged to rely on her own efforts and the charity of her friends for the support of herself and three children.

She also alleges that her husband treated her in a cruel and inhuman manner, threatened to cut her throat with a razor, threw her on the floor and best her with his fist, and further
